General Notes:

[1] FSR = Full Scale Range (Default Settings)

[2] Gain = 2 If all switches are in OFF position

[3] The minimum differential input is determined based on a 10 V excitation and maximum gain to attain the maximum output range

[4] See "Noise" chart located in page 2 for detailed information

All Grounds are internally connected

Use Chassis for systems with cable Shield

All parameters specified on this drawing have been validated for default settings (0-2 mV/V input at 1 kHz bandwidth with a 10 V excitation for 4-20 mA output) unless otherwise specified.
